Introduction to Engineering Design I	
	1
Today: Introduction to the design process	
Designing modular systems	
Recap: The CDIO Approach	
Conceive  What is the problem, how could we begin to solve it?  Design  Figuring out the best approach to the problem	
Implement     Creating a solution that best meets all of your objectives     Operate     How does the system work in the real world and how can it be better?	

Lyoroico	/ E	minutas	١.
Exercise	ı	minutes	١.

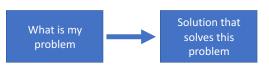

- 1. Get in groups of 3
- 2. Come up with a team name
- 3. Design something to get you from Karaganda to Astana

#### Teams Present

- What did you come up with?
- How did you come up with it?
- Why is your solution good?

## How can we design better systems?

• A more systematic approach to designing systems

• Not creating the solution first

<b>~</b> .		
$\triangle \uparrow \triangle$	n	c
$\mathcal{I}_{C}$	v.	J

- 1. Define Problem Statement
- 2. Define System Objectives
- 3. Define System Requirements (Top level Requirements)
- 4. Define Subsystem Objectives
- 5. Define Subsystem Requirements
- 6. Repeat and Refine

# Example for today: Transportation

- Why do we have so many different types of transportation?
- Do we really need cars, buses, planes, trains?
- How did engineers come up with these things?

Scenario	
<ol> <li>I am traveling alone from Karaganda to Astana</li> <li>I have one box with me, 50cm x 50cm x 50cm</li> </ol>	
3. I am going to make this trip every week for 5 years  4. I want to travel there in 4 hours or less	
Facts:	
• Astana and Karaganda are ~200km apart	
	_
4.5.5.	
1. Define Your Problem Statement	
What is the thing you are trying to solve?	
	1
2. Define System Objectives	
What does my system need to do?	
Break up my problem statement	

3.	Define	Your	System	Rec	ıuireme	nts

- What are the criteria for accomplishing the system objectives
- How do I know that a system objective has been completed or not?
- "The system shall do this thing, and it shall do it this well"

## 4. Define Subsystems and Subsystem Objectives

• How can I break my problem up into smaller ones?

### 5. Define Subsystem Requirements

- $\bullet$  What are the criteria for accomplishing the subsystem objectives
- How do I know that a subsystem objective has been completed or not?

"The subsystem shall  $\underline{\text{do this thing}}\text{, and it shall do it }\underline{\text{this well}}\text{''}$ 

Subsystem requirements accomplish system requirements

6. Repeat and Refine	
How can I improve?	
What if I get new or better information?	
	1
	1
Modularization	
Breaking the big problem down into smaller problems	
breaking the big problem down into smaller problems	
Approach to designing systems	
Approach to designing systems	
System Objectives     System requirements	
Subsystem objectives	
subsystem requirements	

Key things to remember		
<ul> <li>Problem solving is easier when we can break big problems into smaller ones!</li> </ul>		
	Overall System	
Subsystem 1	Subsystem 2	Subsystem 3
